node-2

<<actor>> **Hyperspace**

attributes

prior : GPy.kernel

bounds : list

safe_threshold: float

safeopt_model : SafeOpt

objective_function : callable

...

Objective_Function

Takes the parameters to

evaluate the objective

function and returns

the function value

operations

optimization_process (x, y, current_hs)

deploy_hyperspace (hyperspace_no)

...

Objective_Function

Takes the parameters to evaluate the objective function and returns the function value
